Introduction

The modern crypto World is developing very quickly and it grows every day. New projects are constantly entering the market and it becomes more and more difficult to monitor the possibility of investing in each one.

The last round of development gave us a new era - decentralized finance. In a short period of time, a lot of DeFi projects have emerged that provide various investment opportunities.

Among such tools, various DeX platforms have received great development, allowing you to invest your tokens and earn passively. And on the basis of these platforms, “farms” are increasingly appearing, which reward users with their new tokens for providing liquidity to new projects.

Such passive mechanisms for making a profit can be divided into the following categories:

- providing liquidity to the pool
- Stacking coins
- Profitable farming
- etc

There are hundreds of platforms providing the opportunity to make money in one or more several ways from the list on any of the existing blockchains. They all show huge interest rates in the short term (APY / APR interest), promising huge returns, but it becomes very difficult to choose the right one. After all, there are a large number of parameters that you need to pay attention to in order not to miscalculate and choose the right tool.

To reduce risks and help you choose a reliable platform for your tokens, we are creating **Agronomist.tech** to reduce risks and help you choose a reliable platform for your tokens.

About the project

Agronomist.Tech - is a new analytical platform for DeFi projects, which is aimed at analyzing staking, farming, dex projects.

We are developing a smart product that will promptly respond to changes in market realities and help you choose the most profitable strategy for investing in the DeFi segment.

What we plan to implement:

- collecting the status of liquidity pools from the maximum amount of DeX
- collection of information on profitability from farming and staking of
- various projects
- dashboard for displaying assets of a specific user
- risk analysis for each project
- multi-chain support
- providing advice on choosing a pool/platform for investment
- convenient customizable notifications
- launch our own farms with reinvestment

Tokenomics

It is planned to issue 10 million AGTE tokens:

- 1 million - developers
- 2 million - advertising, marketing, promotion program
- 3 million - a reserve for future pharming and liquidity provision with a freeze
- 4 million - IDO/pre-seed

Tokens will be used to pay for paid functions of the service, receive rewards from your own staking/pharming, and receive rewards from paying for the service. When the paid functions are implemented, it is planned to burn tokens to increase their value and reduce their turnover.

Roadmap

The implementation of the functionality is planned in stages. The first steps will be taken to work in the Solana eco-system, then the addition of BSC and Ethereum blockchains.

The planned dates for adding functionality are as follows:

- June - July 2021 - investigate project and blockchain platform. Grow up community in Discord
- August 2021 - Token distribution (airdrop too)
- September - initial analytics in Solana blockchain for pools
- Autumn 2021 - logging in with the Sollet wallet and displaying data directly to the user; an advanced farming analysis
- Winter 2021-2022 - BSC blockchain will be added (pancakeswap, 1inch, sushiswap)
- Spring 2022 - ETH blockchain will be added (uniswap, 1inch, sushiswap); monitoring and notification of a possible increase in profitability
